## CALENDAR DESCRIPTION

---

The field of building science considers the design and selection of equipment and engineering strategies to achieve energy efficiency and occupant comfort. Students will configure building systems considering building climate and exposure and the movement of moisture, air, and energy within buildings and building zones. The objectives of equity, sustainability, and engineering ethics in the built environment are incorporated into design decisions. Building science principles will be used to design, document, and present a building project.

### PREREQUISITE(S):

All of: C in [MATH 250A](#)

- CO-REQUISITE(S):

All of: C in [PHYS 295](#), C in [CHEM 150](#)

## COURSE LEARNING OUTCOMES / OBJECTIVES

---

1. Discuss the role of equity, sustainability and engineering ethics in the built environment.
2. Describe and explain the main energy flows in buildings, including the influence of climate, behavior of building components, and thermal comfort of users.
3. Identify key measures for reducing the energy demand of buildings.
4. Calculate the main components of the energy balance of a building zone.
5. Apply the equations and methods of analysis related to building energy flows to new problems.
6. Explain the assumptions underlying the simplified treatment of energy flows in buildings, and identify scenarios in which these are not appropriate.
7. Analyze the interactions between the different energy flows in a building.
8. Assess and evaluate design decisions relating to building energy use, including both the technical performance and the broader context.
9. Analyze the influence of climate on energy flows in a building, and devise appropriate engineering solutions to address these.
10. Develop an engineering solution appropriate to a specific context, and critically evaluate performance against soft criteria.
11. Develop an engineering solution from first principles to concept design, including presentation and technical reporting.
