Camosun College is committed to identifying and removing institutional and social barriers that prevent access and impede success.

CALENDAR DESCRIPTION

Students in life science, environmental studies, business, and social science will be prepared for applied calculus in their program of study. Students will: review algebra and study polynomial, rational, exponential, logarithmic, trigonometric, and inverse trigonometric functions, sequences and series. Note: Students who have been away from algebra for more than two years should first refresh with MATH 073, MATH 077, MATH 137, or MATH 139. Only one of MATH 107 or MATH 115 may be used toward a Camosun credential.

PREREQUISITE(S): One of: C+ in Pre-calculus 11, C+ in MATH 073, C+ in MATH 077, C in MATH 097, C- in Pre-calculus 12 – Must be completed prior to taking this course.

COURSE LEARNING OUTCOMES / OBJECTIVES

Upon completion of this course a student will be able to:

1. Demonstrate proficiency in the fundamental concepts of Intermediate Algebra necessary to analyze and interpret single variable functions. This includes but is not limited to: factorization of polynomials and expressions with rational exponents, simplifications of rational expressions, complex fractions and radicals, solving subsequent polynomial, radical, and rational equations, and single variable linear and quadratic inequalities.
2. Demonstrate the ability to understand and interpret visual 2-D representation of single variable relationships. This includes working with the basic concepts of graphing in the coordinate plane with an emphasis on linear equations, circles, and ellipses.
3. Work with analytic representations of single variable relationships and connect basic models to their visual representations. This includes building a foundation of understanding of terminology and notation for functions, including basic definitions and examples.
4. Work with more advanced functions to enable more complex modelling and analysis in follow-on courses. Examples include: quadratic, polynomial, rational, exponential, trigonometric and inverse trigonometric functions.
5. Solve word problems involving arithmetic and geometric sequences and series.
