2. Intended Learning Outcomes

(<u>No</u> changes are to be made to this section, unless the Approved Course Description has been forwarded through EDCO for approval.)

Upon completion of this course the student will be able to:

- 1. Solve linear systems by using row reduction and by using the inverse matrix.
- 2. Find determinants by row reduction and by cofactor expansion.
- 3. Compute dot and cross products and use projections to find distances between lines, points, and planes in 3D.
- 4. Use the vector space axioms to determine whether a mathematical system is a vector space and to prove simple theorems.
- 5. Determine whether a set of vectors is a basis for a vector space and be able to prove simple theorems about linear independence and spans.

0-49	F	Minimum level has not been achieved.	0

Standard Grading System (GPA)

Temporary Grades

Temporary grades are assigned for specific circumstances and will convert to a final grade according to the grading scheme being used in the course. See Grading Policy E-1.5 at **camosun.ca** for information on conversion to final grades, and for additional information on student record and transcript notations.

Temporary Grade	Description
I	<i>Incomplete</i> : A temporary grade assigned when the requirements of a course have not yet been completed due to hardship or extenuating circumstances, such as illness or death in the family.
IP	<i>In progress</i> : A temporary grade assigned for courses that, due to design may require a further enrollment in the same course. No more than two IP grades will be assigned for the same course. (For these courses a final grade will be assigned to either the 3 rd course attempt or at the point of course completion.)

7. Recommended Materials or Services to Assist Students to Succeed Throughout the Course
