### 2. Intended Learning Outcomes

Upon completion of this course a student will be able to:

- Demonstrate proficiency in the fundamental concepts of Intermediate Algebra necessary to analyze and interpret single variable functions. This includes but is not limited to: factorization of polynomials and expressions with rational exponents, simplification of rational expressions, complex fractions and radicals, solving subsequent polynomial, radical, and rational equations, and single variable linear and quadratic inequalities.
- Demonstrate the ability to understand and interpret visual 2-D representation of single variable relationships. This includes working with the basic concepts of graphing in the co-ordinate plane with an emphasis on linear equations, circles, and ellipses.
- Work with analytic representations of single variable relationships and connect basic models to their visual representations. This includes building a foundation of understanding of terminology and notation for functions, including basic definitions and examples.
- Work with more advanced functions to enable more complex modelling and analysis in follow-on courses. Examples include: quadratic, polynomial, rational, exponential, trigonometric and inverse trigonometric functions.
- Solve word problems involving arithmetic and geometric sequences and series.

### 3. Required Materials

- (a) Course Pack: Materials for a course pack – including notes and review problems – will be posted on D2L. These materials must be printed off before class and used during the lecture.
- (b) Textbook: Algebra and Trigonometry, Sullivan, 10<sup>th</sup> edition (Recommended)

- (c) As per department policy, the only calculator permitted for use on tests and the final exam is the **Sharp EL-531** (or EL-510R) scientific calculator.
