4 Short Description

This course introduces students to the limit states design method in accordance with the BC Building Code. Students also learn to design timber beams, columns, diaphragms, shear walls and connections using the relevant Canadian design codes. Computer based analysis tools are also introduced.

5 Intended Learning Outcomes

Upon successful completion of this course, students will be able to:

- Use BC Building Code and supplements in Limit States Design calculations of dead loads, live loads and loads imposed by snow, wind and temperatures.
- Present properly formatted design notes.
- Describe factors affecting a structure's performance during an earthquake.
- Determine when it is appropriate to use a static design approach for earthquake or wind calculations.
- Explain the use of wood construction materials.
- Calculate material resistance for wood components in accordance with relevant CSA Standards.
- Design timber construction elements including joists, beams, columns, stud walls, shear walls, diaphragms, and connection details.
- Describe the concept of load path.
- Use computer based tools to determine loads and stresses for structures.
