COURSE LEARNING OUTCOMES / OBJECTIVES

Upon successful completion of this course a student will be able to:

- Describe the internal structure and evolution of the Earth, and have a working knowledge of principles of geological time, Earth history and the geologic time scale;
- Identify common rock-forming minerals and common rocks, and briefly describe their composition, mode of origin and significance as an engineering material;
- Discuss physical and chemical processes of weathering and soil development, and erosion of geologic materials by gravity, water, ice and wind with reference to engineering material;
- Discuss the theory of plate tectonics in relation to geological processes such as volcanism, faults and earthquake activity, mountain building, and the rock cycle;
- Discuss geological hazards (earthquakes, mass-wasting, subsidence, slope stability, and acid mine-drainage) and other topics of environmental concern to the engineer; and
- Interpret and use geological maps as effective tools for engineering planning.
